If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see pages 7-8, filed March 6, 2008, with respect to Claims 1, 2, 4, 7-10, 12, 13, and 15 have been fully considered and are persuasive. The 35 U.S.C. 103(a) rejections of Claims 1, 2, 4, 7-10, 12, 13, and 15 have been withdrawn.

### ***Allowable Subject Matter***

2. Claims 1, 2, 4, 7-10, 12, 13, and 15 are allowed.

The following is an examiner's statement of reasons for allowance:

3. The prior art taken singly or in combination do not teach or suggest the combination of all the limitations of independent Claim 1. Independent Claims 10 and 13 are allowable for similar reasons. Dependent Claims 2, 4, 7-9, 12, and 15 each depend from one of these independent claims, and therefore also contain allowable subject matter.

4. The closest prior art (McGuinness US006104416A) teaches a method of storing an array of digital data into a memory (Col. 3, lines 14-16) having a plurality of memory pages, at least one memory page which only has a row with a plurality of memory cells (*pixels in a row of one stripe are stored in a word, word address*, Col. 8, lines 45-58), the method comprising the steps of dividing the array of digital data into a plurality of block units (Col. 3, lines 16-18) each of the block units having a plurality of odd rows and a plurality of even rows (Col. 11, line 51-Col. 12, line 13), each of the odd rows and the even rows having at least one byte (*one byte of storage is required for each pixel*, Col. 4, lines 47-48; *putting 16 pixels into each row*, Col. 11, lines 52-54); storing subsequent odd rows of at least one of the block units into consecutive storage locations in the first memory section (532) (Col. 11, lines 57-63), and storing subsequent even

rows of at least one of the block units into consecutive storage locations in the second memory section (534) (Col. 11, line 65-Col. 12, line 13). However, McGuinness does not teach that at least one memory page has the first memory section and the second memory section; and that the first areas and the second areas in the first memory second and the second memory section respectively are in interlaced arrangement.

5. Another prior art (Perrin US005872577A) discloses at least one memory page which only has a row with a plurality of memory cells having a first memory section and a second memory section; and storing subsequent odd fields into consecutive storage locations in the first memory section, and storing subsequent even fields into consecutive storage locations in the second memory section (Col. 3, lines 1-9; Figure 3). However, Perrin does not teach the first and second areas of the first and second memory sections respectively having consecutive storage locations with each of the first and second numbers being larger than one; and that the first areas and the second areas in the first memory second and the second memory section respectively are in interlaced arrangement.

#### ***Prior Art of Record***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

1. McGuinness (US006104416A) teaches storing a digital array into a memory, the digital array being partitioned into tiles, each having a predetermined number of rows and columns, and arranged in such a manner as to allow for easy retrieval of the subsequent row upon the retrieval of the preceding row (Col. 3, lines 14-26).

2. Perrin (US005872577A) teaches the access to memories being effected with an alternate addressing of each of two banks for storing information in such conditions that the luminance information of 4 macroblocks of the odd field (or even field) of the memory page is evenly divided into two banks in a memory, and that the chrominance information of 8 macroblocks of the odd field (or even field) of a memory page is evenly divided into the two banks in a memory and, for each bank, into two successive pages (Col. 2, lines 13-29).
